SUMMARY

I am a Unity software developer passionate about building immersive VR experiences and interactive 3D applications. I enjoy creating engaging systems, solving technical challenges, and turning ideas into polished products. With experience in Unity and C#, I have developed VR training applications, simulations, and real-time experiences for enterprise clients across different industries.

TECHNICAL SKILLS

Game Engines	Unity, Unreal Engine
Languages	C#, C++, Python, SQL
Multiplayer	Photon PUN and Fusion SDKs
Tools & Platforms	Git, Perforce, Plastic SCM, Sourcetree
VR Headsets	Meta Quest 2, Meta Quest 3, Pico, HTC Vive

EXPERIENCE

- VR Developer October 2023 – Present
- Junior VR Developer September 2022 – October 2023
VR Vision Toronto, ON
 - Developed immersive VR training applications in Unity for enterprise clients including Coca-Cola, Enel Green Power, Avangrid, Toronto Hydro, and Toyota Material Handling.
 - Designed and implemented interactive training simulations, procedural systems, user interfaces, and VR interactions for Meta Quest and Pico headsets.
 - Optimized Unity applications for performance, stability, and smooth user experiences across multiple VR platforms.
 - Developed reusable systems, tools, and frameworks to improve development efficiency, scalability, and long-term maintainability.
 - Collaborated with designers, 3D artists, and project managers to deliver high-quality, production-ready VR applications.
 - Built, tested, deployed, and maintained VR applications throughout the complete software development lifecycle.

Unity Programmer

Octopus Moon Studio

September 2021 – April 2022

Toronto, ON

- Developed gameplay mechanics and interactive mini-games using Unity and C#.
- Built a procedural racetrack generation system, enabling dynamically generated levels.
- Designed and programmed a custom character controller from scratch.
- Collaborated with the development team to prototype and iterate on gameplay features.

Student Researcher

George Brown College

December 2020 – April 2021

Toronto, ON

- Developed a multiplayer virtual campus experience using Unreal Engine.
- Implemented real-time text and voice chat functionality for multiplayer sessions.
- Configured and deployed dedicated multiplayer servers on AWS.

Engine Programmer

Fanafzar

April 2020 – September 2020

Tehran, Iran

- Implemented a custom memory allocator in C++ and core engine subsystem management architecture.
- Wrote unit tests to improve engine reliability and maintainability.

EDUCATION

Advanced Diploma – Game Programming

George Brown College – Toronto, ON

Bachelor of Engineering – Information Technology

University of Isfahan, Isfahan, Iran

Achievements: Winner – Ubisoft NEST API Challenge, SheHacks 2021 | Dean's List – George Brown College
